

## Automation Test Engineer

City:Mandaluyong City

Role:Automation Test Engineer

Salary:Open Salary

Description:Testing software and ensuring quality is not always an easy task. Requirements change, different users have different expectations about how the software should work, not to mention the variety of environments and configurations that a software product can run in.

Responsibilities:

- Design test cases through following client requirements
- Implement automation functional testing
- Help develop and enhance the continuous integration testing framework
- Report bugs and issues encountered during testing
- Participate in project planning and estimation
- Collaborate with the development team and discuss solutions to help deliver high quality application
- Perform integration, regression, exploratory, and smoke tests for production release cycles
- Establish and maintain test documentation
- Write test report and analysis for stakeholders
- Other software testing and development related activities as deemed necessary

Benefits:

- Normal working hours - no late or night shift
- Great job offering package including allowances and health package
- Inspiring, conducive and open working environment
- Latest tools, methodologies and technologies in place
- Outstanding team collaboration and positive team spirit
- Professional career development plan
- Respectful and supportive international corporate culture
- Working in international project setups
- Lots of fun and bonding activities
